### **HUNTAIR FANWALL TECHNOLOGY Retrofit Installation Featured in *the NEWS***

Eden Prairie, MN (July 30, 2009)—*the NEWS* magazine recently featured a FANWALL TECHNOLOGY® retrofit installation completed at the Sutter Roseville Medical Center. The Sacramento, CA medical facility was faced with a challenging problem: several key surgical suites were served by an aging, single, 139,000 CFM vaneaxial fan. Consulting engineers estimated it would take up to a week or more to remove and replace the fan and its drive motor in the event of a motor failure—an event which would shut down the medical center.

Rick Barney, project supervisor for Sutter Roseville Medical Center in Roseville solved this problem by specifying two FANWALL® multiple fan arrays. The FANWALL arrays were successfully installed while the original fan stayed in service, with no interruption of patient service or comfort. The FANWALL modules, which are capable of passing through standard-width doorways, were small enough to fit into position without major building demolition. After the new fan system was on line, the old fan was dismantled and removed in increments

Beyond streamlining the retrofit process without interruption in service, FANWALL TECHNOLOGY provides greater airside reliability, lower sound levels, lower energy use, less maintenance, and greater capacity within the same footprint. Says mechanical engineer Scott Karpinen, “We saw a reduction in the energy requirement for the FANWALL system...We were able to remove the custom sound traps, operate at a higher airflow rate and static pressure, and still see a reduction of 35 hp in fan horsepower.”
